Excerpt: . marking the outgoing and the incoming of the two most remarkable phenomenal aspects of the physical history of our planet--and the products of which, garnered up in ages long past, are now so essential to our progress in art, science, and commercial enterprise. The fishes up to this period are all of a type, and are modelled according to a special plan, both in the scaly envelope and osseous structure. The interior skeleton is composed of cartilage, and the outward covering of true bone, the scales, fins, tail, and external plates of the head being all constructed of bony material. The back-bone, or dermal ridge, extends to the extremity of the tail-fin, thus at once adding strength to the cartilaginous body, and giving a greater degree of propelling power to its caudal organ. It is hence called Heterocercal, in contrast with all existing...
