Excerpt: . . . in the mouth or about the lips, he should immediately try to remove the poison by suction, which is probably the safest thing that can be done. He should then soak the part in a formaldehyde disinfectant and as soon as possible cauterize the wound. For this purpose use nitrate of silver or carbolic acid. Chapter XI. CHEMISTRY OF THE BODY. In this chapter it is not intended to attempt more than a glance at such facts in chemistry as may be of interest to the embalmer, and to adduce and simplify such points as it is important, or at least expedient, that he should be familiar with. With this end in view, it is thought well to begin with a few commonplace definitions. Chemistry is that science which treats of atoms and molecules, and teaches those rules which govern their changes and combinations....
